PROFILE

A Frontend Developer with experience building responsive, production-ready web interfaces using React, JavaScript and Tailwind CSS. Strong knowledge of state management, API integration, and version control (Git), with experience collaborating remotely with UI/UX designers to enhance user experience. Built and deployed a mobile application using React Native, incorporating biometric verification. Also built and shipped multiple real-world applications from concept to deployment.

PROFESSIONAL EXPERIENCE

Intern, IHS Towers 07/2024 – 09/2024 | Lagos, Nigeria

- GICL & Rural Telephony Departments
- Documented completed project work and uploaded the details across multiple routes and states in Nigeria using Lepton software.
- Learnt about network and gained hands-on networking experience by connecting two laptops through a Cisco switch and setting them up to communicate.

IT Intern, Cambridge Broadband Networks Limited Africa (CBNL) 07/2025 – 09/2025 | Lagos, Nigeria

- Developed a responsive website prototype for CBNL using modern web technologies with over 15 pages, including the Home, About, Services, Solutions pages e.t.c.
- Created an internal newsletter on data backup and protection to promote data security awareness among staff.
- Created a PowerPoint presentation for internal company use showing their values and key information for all staffs and visitors to see when you step into the company.
- Provided technical support to staff, including configuring email signatures, setting up laptops, installing software, and preparing devices for new employees.

SKILLS

Technical Skills

- Languages: JavaScript, Python
- Frontend: React, React Native (Expo), Tailwind CSS
- Backend & Database: Supabase
- Tools & Platforms: Git, GitHub
- Other: Facial Recognition Integration (Face++), Payment Integration (Paystack), Responsive Design

Soft Skills

- Collaboration
- Communication
- Adaptability
- Problem-Solving

PROJECTS

HostelPal, Multi-Factor Hostel Attendance Verification System

- Built as a mobile app for students and combines three verification layers: Matric number lookup, private IP subnet checking (to confirm on-premises presence), and facial recognition (Face++) to reduce the chance of proxy attendance records.
- A web dashboard for hostel staff, giving real-time visibility into attendance records and access to past records for their assigned hostel, replacing manual/paper-based checks.
- Ran empirical testing with 11 volunteers to adjust the facial recognition confidence threshold for accuracy.
- Result: A verifiable attendance system that reduces proxy check-ins, improves record accuracy, and removes the need for staff to move room-to-room.

Jia-ride 🚗, School Transport Booking Platform (Co-Founder)

- Built a web-app giving parents and students a structured way to find and book school transport services with ease.
- Implemented a manual payment system for now requiring receipt upload for verification, with transport services able to reject a booking if the receipt is invalid.

- A dashboard for transport services to view all bookings made with them, along with required booking details.
- Enables drivers assigned to a ride to send text location updates to parents/students on that booking, keeping them informed of the ride's progress.
- Currently at MVP stage, live and onboarding early users.

Haple , *Helping All People Locate Entrepreneurs (Co-Founder)*

- A web-app helping student sellers gain visibility to campus buyers, addressing the challenge of limited customer reach.
- Includes seller profiles and a category-based browsing system, allowing buyers to filter sellers by product type.
- Integrated WhatsApp as the initial contact channel, prioritizing fast buyer-seller connection over building in-app messaging for the MVP.
- Result: live product with an initial 15+ sellers onboarded, validating demand before building out more complex features.

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science, *Bowen University, Iwo, Osun State, Nigeria*

2022 – 2026
